

**Survey Date
June 15, 2015**

Energy & Metals Consensus Forecasts surveys more than 40 energy and metals analysts every other month for a range of commodity price forecasts. The results covering over 30 commodities – together with reference data, analysis, special surveys, and the underlying global macroeconomic outlook – are sent to subscribers by express mail and e-mail.

Our next issue of EMCF will be available on August 21, 2015 and feature a special survey on **Factors Affecting Commodity Prices**.

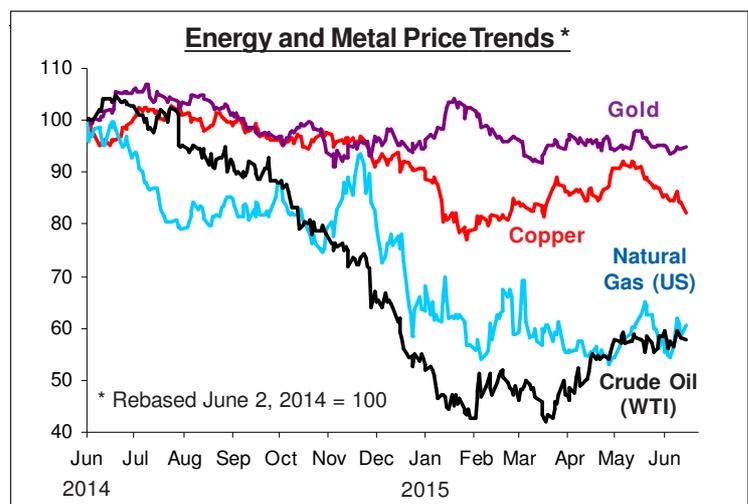

Real (Inflation-Adjusted) Commodity Price Trends and Forecasts: A Special Analysis

In this month's special analysis on pages 26 and 27, we review how major commodity prices have moved in recent years and consider how inflation-adjusted price projections can alter sentiment over the longer-term horizon.

Overview

Despite the relative signs of stability among the major commodity classes (a select few in chart below), substantial uncertainty surrounds the near-term outlook. Most have benefited from a pull back in the **US Dollar** (page 3), the unit in which they are predominantly priced in. In addition, the underlying demand for energy and metals tends to strengthen in Q2 due to a seasonal improvement in industrial activity, following a winter slowdown. **WTI** (page 6) is now valued at around US\$60 per barrel, more than US\$15 above its mid-January low. **Iron Ore** (page 19), a key ingredient in the production of **Steel** (page 18) and an important bellwether to the industrialisation of China, has strengthened a little as well. The price upturn in iron ore may partly be due to earlier sharp corrections and signs of a drop in Chinese port stockpiles of the raw material. However, it will take time for

(continued on page 2)

(continued from front page)

excesses in supply to rebalance, while demand for commodities overall is hampered by pockets of global uncertainty (page 3). The situation in the energy sector is particularly complex, notably the supply outlook for Iran, which has weighed on the price outlook. Production of crude oil remains high despite cuts in non-OPEC supply as some Persian Gulf countries spend heavily on production and refining capacity for strategic reasons. For the base metals, industrial developments in China continue to be the main driver of price expectations.

Copper (page 14) has declined in recent weeks, despite disruptions to mines in northern Chile and efforts from Beijing to stimulate Chinese demand. Most observers expect a price recovery but retain a cautious view for the metal as lower business overheads (partly through favourable input cost trends) have reduced the likelihood of vast production cuts needed to remove excess capacity in the industry. On page 5, we feature updated **Long-Term Forecasts** for over 25 commodities, covering the years **2015 to 2024**.

SUMMARY OF SELECT ENERGY & METALS CONSENSUS FORECASTS

See individual commodity pages for mineral specifications	See page	% change since end Dec. 2014	Spot Price Jun. 15 2015	(Nominal, Quarterly Averages) Consensus Forecasts			Forecast % change to Mar. 2016

- All individual commodity forecasts on pages 6-25 are listed in descending order of their approximate 1-year percentage change estimates. Consensus forecasts are mean averages of individual quarterly average forecasts.
- Historical price data in this publication has been provided by Commodity Research Bureau and other sources.
- Gross Domestic Product (GDP) is expressed in real (i.e. inflation-adjusted) terms. GDP and Industrial Production are expressed as average percentage changes over the previous calendar year unless otherwise indicated.
- 1 kilogram = 32.1507 troy ounces
- 1 short ton = 0.907 metric tonnes = 2000 pounds
- 1 kilogram (kg) = 2.2046 pounds
- 1 barrel = 42 US gallons
- 1,000 kilograms = 1 metric tonne = 2204.6 pounds
- 10 Therms of Natural Gas = 1 million Btu = 1MMBtu
- 1 long tonne = 1.016 metric tonnes = 2240 pounds
- 1 metric/long tonne unit (MTU/LTU) = 1/100 of a metric/long tonne

Economic growth rates provide a valuable insight into the behaviour of energy and metals prices, with industrial production growth forecasts in particular giving an overview of the likely demand for many commodities. The forecasts below are taken from the current issues of our publications **Consensus Forecasts**, **Asia Pacific Consensus Forecasts**, **Eastern Europe Consensus Forecasts** and **Latin American Consensus Forecasts**.

Shift in Global Growth Risks and Composition

As highlighted by the recent spike in risk aversion, the global economy continues to face significant challenges. It now appears likely to expand at a slower rate in 2015 than in 2014, due to a loss of momentum in China, which in mid-May persuaded Beijing to cut rates for the third time within six months. A high level of uncertainty also emanates from Brazil and Russia, with the latter in the grips of recession, while investors remain cautious about the ability of the Indian government to deliver promised reforms, following its recent retrospective tax fiasco. Confidence in the G-7 economies has, in contrast, improved during the past six months. The possible exceptions are the US and the UK, as their recent expansions failed to match the pace set in 2014. Forecasts for

2015 have been trimmed in response, but continue to suggest solid performances in both. US real GDP contracted by 0.7% (q-o-q annualised) in Q1, down from 5.5% and 2.2% in Q3 and Q4 of 2014, respectively. In Europe, ongoing troubles in Greece threaten to spread, as Athens is running out of time to assure the IMF and its other creditors of its commitments to fiscal austerity and meeting its financial obligations. The knock-on effects of a possible default are hard to anticipate, but the euro zone is not as susceptible to contagion as before. Resilience in Germany, Spain and Ireland has been followed by signs of improvements in France and Italy. In Asia, the outlook for Japan, which contracted in 2014, has brightened, following an upwardly-revised GDP outturn of 3.9% (q-o-q annualised) in Q1.

Focus on Fundamentals

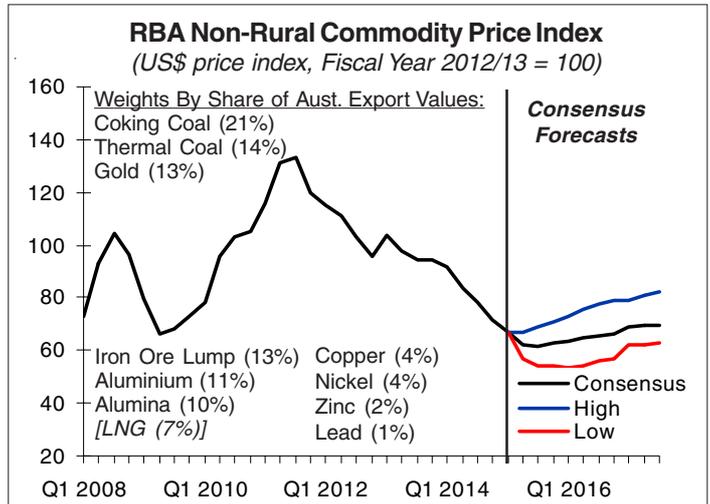

The recent climb in government bond yields (led by the German bund) has dominated the headlines, as investors sought to curb their exposure to risk. FX volatility, which had climbed sharply during the second half of 2014, has remained relatively high, due to divergent monetary policy expectations

between the US and other major countries. The Japanese yen, which has lost 4.3% of its value in the year to date, received some support last week, following news that Q1 GDP growth was revised sharply higher. However, its devaluation bias (as illustrated by the slump in May) has deepened fears about competitive FX dynamics across Asia.

Commodity price indices are useful aggregates of individual commodity price trends. We focus here on two commodity price indices: **The Economist Base Metals Index** (which weights the prices of major base metals according to their share of world trade in 2005) and the **Reserve Bank of Australia (RBA) Non-Rural Commodity Price Index** (which weights the prices of major minerals according to their share of Australian exports in 2012/2013). Both indices are expressed as US\$ prices in a given base year and track the performance of their particular subset of commodities. In addition to showing historical data from the two indices, we also show consensus forecasts for both over the next ten quarters. These are calculated from weighting consensus commodity price forecasts from this edition's survey. In the first two charts below, we also show the highest and lowest projections over the forecast horizon in order to illustrate the range of forecasts.

The Economist Base Metals Index is a sub-index of the headline Economist Commodity Price Index, containing six base metals: Aluminium, Copper, Lead, Nickel, Tin and Zinc. The index base year is **2005 =100**, and the headline index is available in sterling and euros, as well as US dollars. It is published on a weekly basis. *Energy & Metals Consensus Forecasts* then converts this week-by-week data into quarterly averages and calculates the index forecasts by using our panellists' projections for the individual metals.

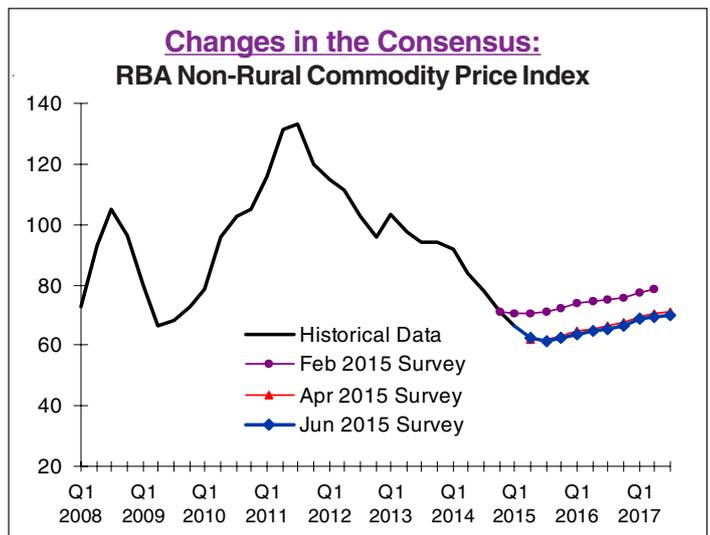

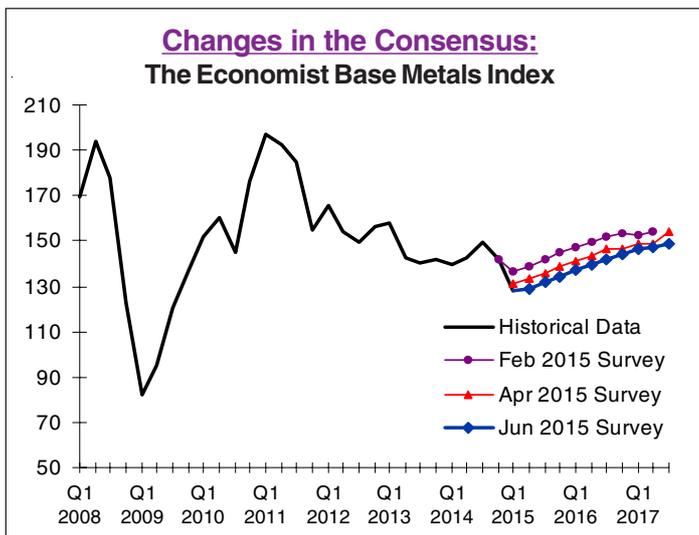

The RBA Non-Rural Commodity Price Index is a sub-index of the RBA's Headline Index of Commodity Prices. The index uses an Australian fiscal base year **2012/2013** (July to June) and weights major minerals (listed above) according to their share of Australian export values. Oil is excluded while liquefied natural gas (LNG) is included (it is some 7% of the index, but is not included in *Energy & Metals Consensus Forecasts* calculations, as we do not survey for LNG forecasts).

Recent Historical Data and Projections Using Consensus Forecasts

Supply Continues to Exceed Demand

- ◆ Brent has recovered to near US\$65 per barrel in recent months, around US\$20 above its mid-January low.
- ◆ The upturn was partly buoyed by demand from Asia and concerns about supply disruptions from the Middle East and North Africa.
- ◆ Further price improvements will depend on the recovery of the global economy and OPEC production levels, notably crude oil supply from Iran, which could add to the current situation of excess. The consensus is predicting that Brent will average US\$59.92 per barrel in 2015 and US\$70.17 in 2016.

Crude oil is refined into numerous saleable products including gasoline and heating oil. The crack spread is used to estimate the profitability of refining the raw material. When the spread is positive, the price of the refined products is above that of crude oil, helping profitability. The chart above shows a commonly used 3:2:1 crack spread, reflecting a ratio of refinery output of 2 barrels of RBOB gasoline and 1 barrel of heating oil from 3 barrels of WTI crude oil.

Near Term Seasonal Support

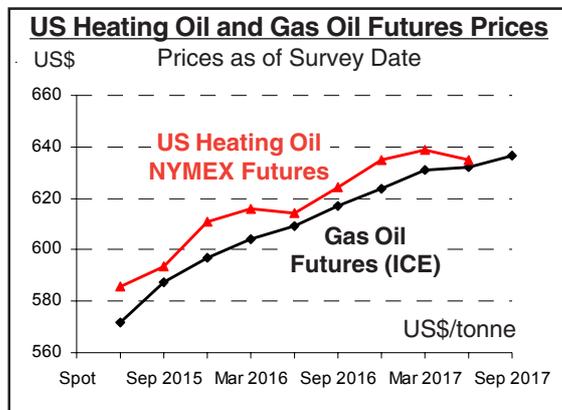

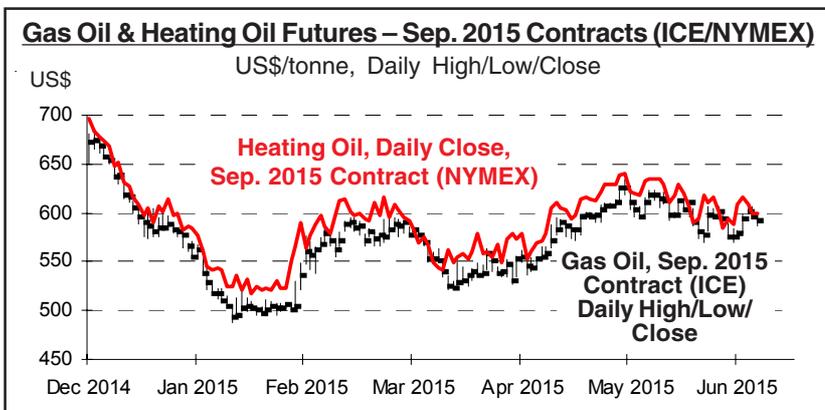

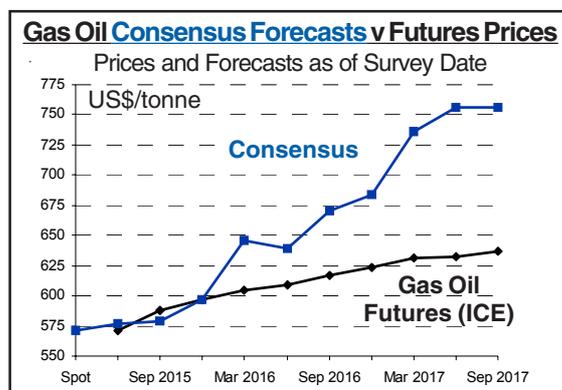

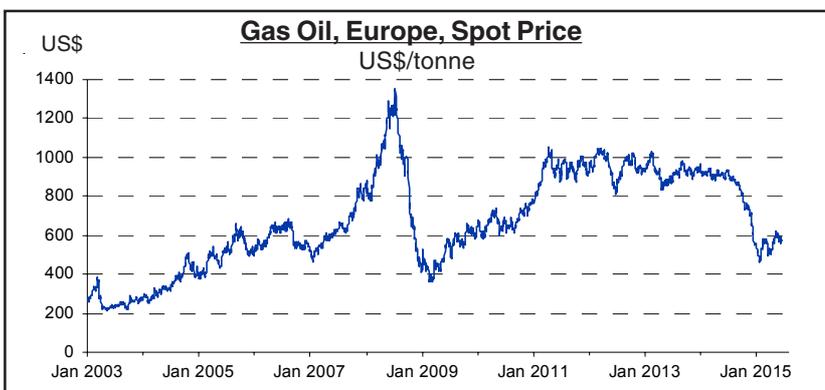

- ◆ The wholesale cost of RBOB gasoline, which excludes taxes (around 65 cents), rose to US\$2.791 per gallon in late April, but dropped back to US\$2.099 on June 15.
- ◆ Recent volatility partly reflects unplanned refinery outages in parts of the US, as well as excess supply and global uncertainties. Positive employment trends have raised expectations regarding consumption ahead of the summer driving season.
- ◆ The crack spread has decreased as the cost of RBOB has dropped at a faster pace than that of crude oil, but it remains much higher than the level at the start of 2015.

Small Natural Gas Premium

- ◆ The price US Henry Hub inched a little higher last week, as warm weather fuelled expectations of a hot summer.
- ◆ Power plants burn more fuel as the grid is pressured by air conditioning usage, while the risk of supply disruptions increase alongside higher chances of Tropical storms (a phenomenon known as El Nino).
- ◆ These developments will probably not be enough to trigger a significant near-term price correction, but should reduce excesses in supply caused by shale oil production.

- Positive Medium- to Long-Term Outlook**
- ◆ Although the price of uranium has remained at a low level (middle left chart), most panelists retain an optimistic view.
 - ◆ Free trade deals between Australia and several large Asian countries (namely China, Japan and South Korea), alongside fresh efforts by the G7 nations to de-carbonise the world economy, suggest a turnaround in demand for the nuclear fuel.
 - ◆ US\$40/lb is considered to be the floor price and a long-term figure in excess of US\$70 may be required to kick start investment in the sector and avoid a supply gap.

World Nuclear Electricity Production (2010)			
Producers (% share of World)	Installed Capacity (Gigawatts)	Nuclear power as a % of total domestic electricity	
USA 30.4%	USA 101	France 75.9%	
France 15.6%	France 63	Ukraine 47.3%	
Japan 10.4%	Japan 49	South Korea 29.9%	
Russia 6.2%	Russia 24	Japan 26.0%	
S. Korea 5.4%	Germany 20	Germany 22.6%	

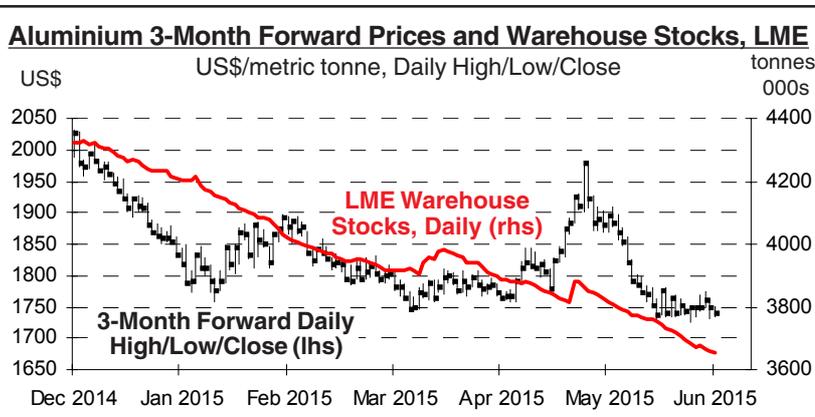

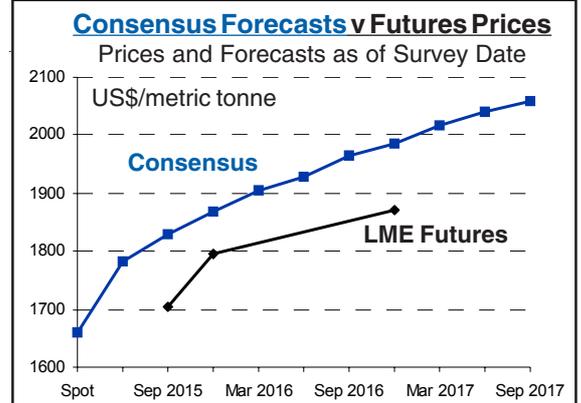

Uranium futures began trading on NYMEX in May 2007 in an attempt to introduce greater price transparency. Volumes and liquidity are currently very low (see chart above left).
Futures Market: NYMEX Pricing: US\$/lb Contract Size: 250lbs Trading Months: 60 consecutive months. Settlement price: The final settlement price is the spot-month end price published by UxC.

Chinese Exports Fuel Supply

- ◆ A supply glut, led by the expansion of Chinese exports, has pinned down prices of aluminium, which dipped below US\$1700 per tonne last week. Government support has helped Chinese producers, lowering break-even costs and keeping smelters active.
- ◆ In the rest of the world, mine closures and tighter production continue. Big non-Chinese producers Alcoa and Rusal are reportedly shutting high-cost plants to pursue new low cost ventures. Rusal has benefited from the Russian rouble's steep declines.
- ◆ Stalling production may help to reverse the downtrend in prices further out.

Aluminium Production (2013)			Consumption (2013)

Global Growth Concerns Weaken Prices

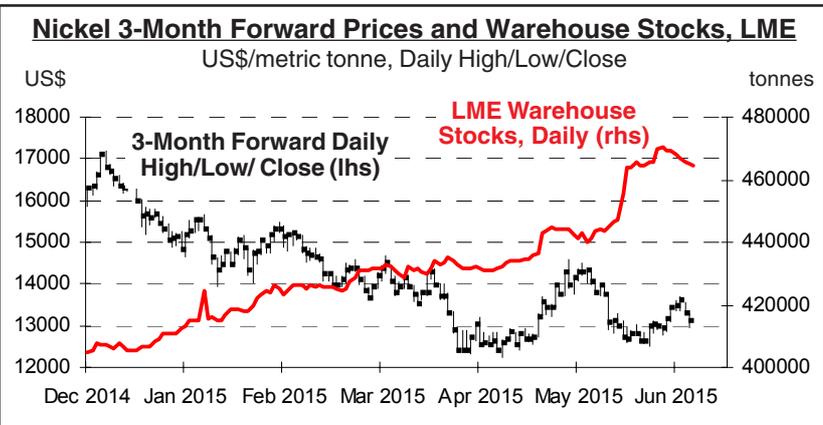

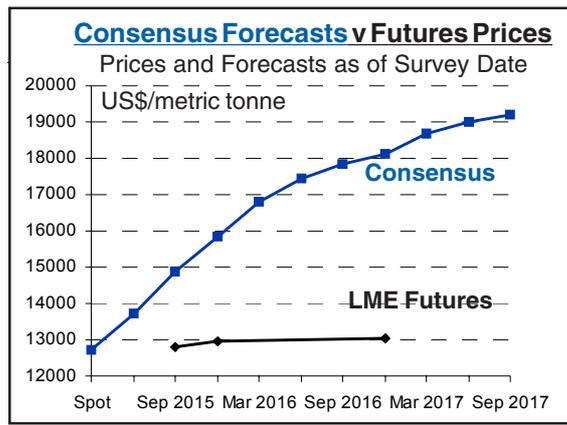

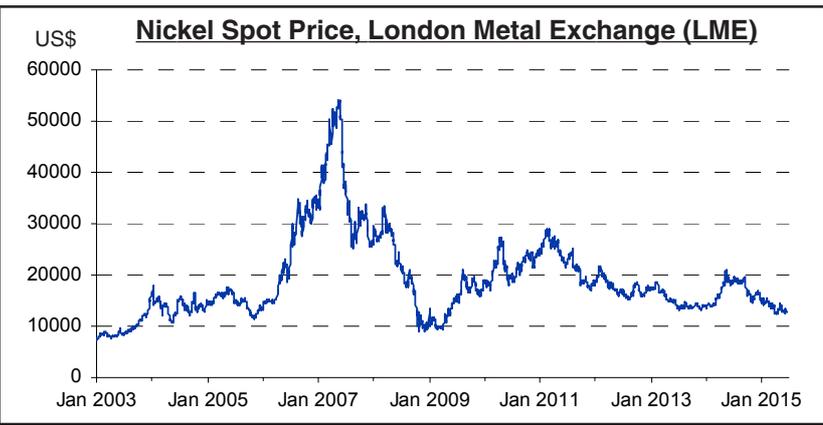

- ◆ Copper has slipped back below US\$5800 per tonne amid growing concerns over softer global demand.
- ◆ 2015 global growth was downgraded in June's OECD report and mixed data releases in China have dented copper prices. Chinese imports slumped in May, while government stimulus measures have thus far failed to ramp-up activity.
- ◆ A strong US dollar and bulging inventories on the London Metal Exchange add to the bearish outlook for the red metal. Our panel anticipate a 6.1% climb by March 2016.

World Production of Copper (18.3 million tonnes in 2013)

Mine Production % of world total (2013)		Smelter Production % of world total (2013)

Production Cutbacks Anticipated

- After increasing above US\$14000/T in early May, nickel slipped back to US\$12735 on our survey date. Recent soft demand and significant upturn in stocks (which have reached record levels on the LME this year) have battered the ductile metal.
- Potential new stimulus measures from the Chinese government may revive demand and stem the price decline.
- The consensus is predicting a sharp recovery in the price of nickel during the next four quarters, partly because of expectations of a tightening in supply.

Nickel Production and Consumption by World Share (2013)					
Production	000s tn	% of world	Consumption	000s tn	% of world
1. Indonesia	477.0	21.0%	1. China	897.0	50.6%
2. Philippines	378.1	16.6%	2. USA	138.0	7.8%
3. Russia	240.0	10.5%	3. Japan	129.5	7.3%
4. Australia	234.2	10.3%	4. S. Korea	78.6	4.4%
5. Canada	223.3	9.8%	5. Germany	78.1	4.4%
World	2275		World	1772	

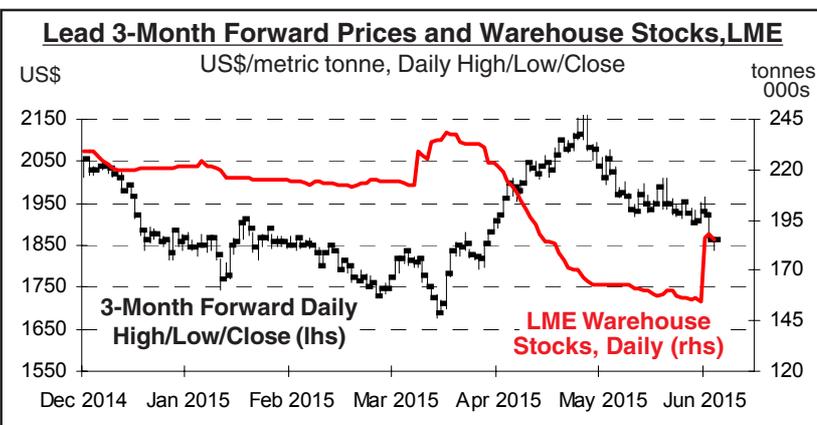

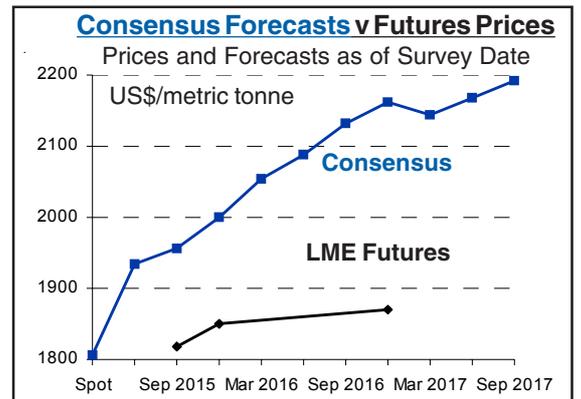

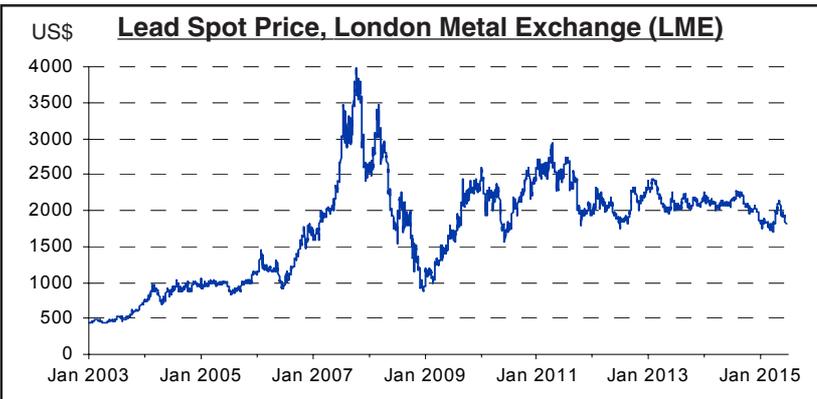

Nickel prices are closely related to demand from stainless steel producers who account for about two-thirds of total demand. **Futures Market:** LME **Pricing:** US\$/tonne **Contract Size:** 6 tonnes **Delivery Dates:** Daily for cash to 3 month contracts, Wednesdays for 3 month to 6 month contracts; then every third Wednesday for 7 months out to 63 months. **Contracts Traded:** 18,079,099 (2014).

Prices Plunge as Inventories Rise

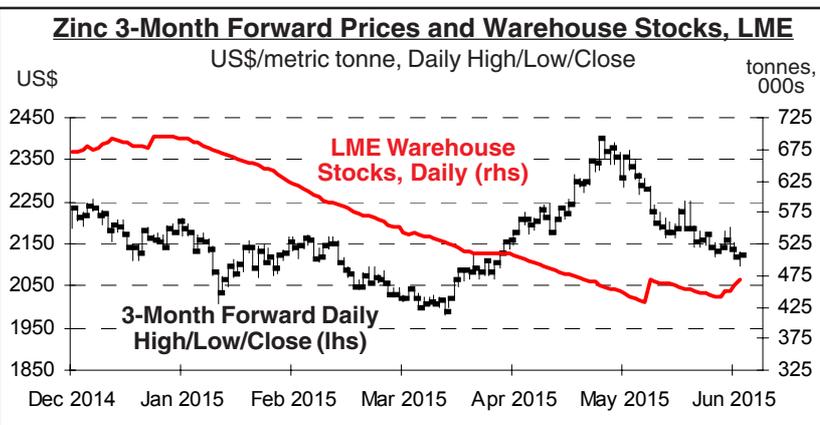

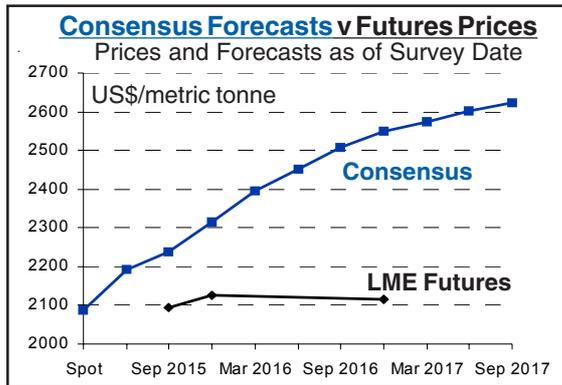

- ◆ Stockpiles jumped amid news of an unexpectedly large delivery at the Dutch port of Vlissingen. Prices slumped significantly in mid-June to around the US\$1825/T mark.
- ◆ In May, lead prices had advanced by more than 15% from the start of 2015 following a raft of cancelled warrants on the LME. However, the recent supply gains and market pessimism over a stalling Greek debt deal have contributed to a sharp reversal.
- ◆ Car sales have picked up noticeably in the US and Euro area, which should support demand for batteries.

Lead Production and Consumption (2012)

Production	% of world total	Consumption	% of world total
1. China	53.6%	1. China	44.6%
2. Australia	11.8%	2. USA	14.4%
3. USA	6.6%	3. India	5.0%
4. Peru	4.7%	4. South Korea	4.1%
5. Mexico	4.5%	5. Germany	3.6%

Lead prices can be related to zinc prices as the metals are co-produced. Demand is currently led by increased demand for batteries in Asia. **Futures Market:** LME Pricing: US\$/tonne **Contract Size:** 25 tonnes **Delivery Dates:** Daily for cash to 3 month contracts, Wednesdays for 3 month to 6 month contracts; then every third Wednesday for 7 months out to 63 months. **Contracts Traded:** 12,872,940 (2014).

Sharp Downturn Amid Supply Upturn

- ◆ Zinc prices have slid after briefly peaking above US\$2400 per tonne in May. The sudden decline (to US\$2087 on our survey date) has wiped out most of the gains the metal had made this year.
- ◆ Stocks in LME warehouses have stabilised and suggestions that sizeable amounts of it exist in non-monitored facilities have dimmed supply fundamentals. Chinese smelter output shows no signs of slowing.
- ◆ The outlook may improve as the Lisheen mine closes later this year, but activity at the Century mine may now continue into Q4.

Zinc Production and Consumption (2013)			
Production	% of world total	Consumption	% of world total
1. China	35.8%	1. China	44.3%
2. Australia	11.5%	2. USA	7.2%
3. Peru	10.2%	3. India	5.0%
4. India	6.0%	4. S. Korea	4.3%
5. USA	6.0%	5. Japan	3.8%

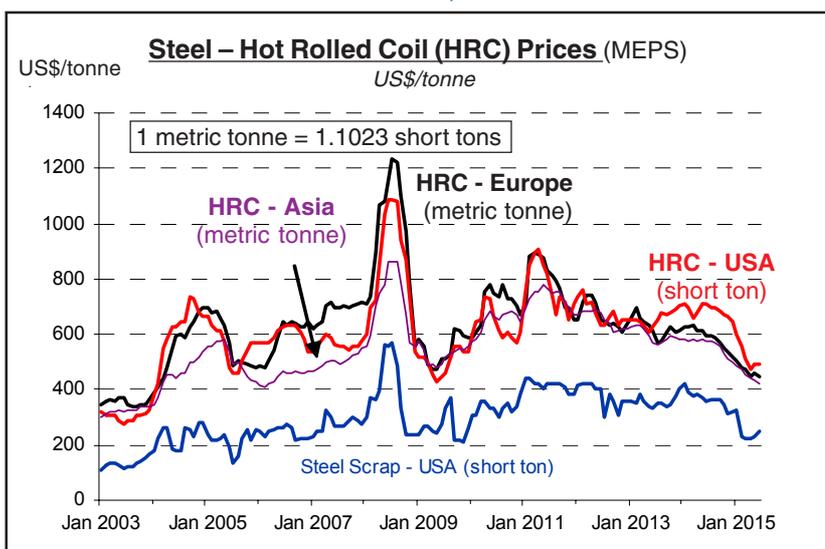

Zinc's primary use is in galvanising steel. **Futures Market:** LME **Pricing:** US\$/tonne **Contract Size:** 25 tonnes (+/- 2%) **Delivery Dates:** Daily for cash to 3 month contracts, Wednesdays for 3 month to 6 month contracts; then every third Wednesday for 7 months out to 63 months. **Contracts Traded:** 30,323,897 (2014).

Seasonal Decline Adds to Industry Woes

- ◆ Steel prices in the world's dominant market, China, has slumped to near decade lows as investment in property and infrastructure slowed toward the end of peak construction season (between April and June).
- ◆ Prices for key ingredient, iron ore, have strengthened in recent weeks (see chart, facing page) amid lower shipments from major suppliers, Australia and Brazil.
- ◆ The European Commission has vowed to help domestic steelmakers by clamping down on price dumping and the flood of cheap imports from China and Russia.
- ◆ The consensus, on balance, is predicting that HRC Steel will rise by 5.3% in Europe over the next twelve months, compared with a decline of 1.2% in Asia.

Steel Production and Consumption (2013)			
Producers	% of world total	Consumers	% of world total
1. China	48.2	1. China	46.0
2. Japan	6.9	2. United States	6.5
3. United States	5.4	3. India	5.0
4. India	5.0	4. Japan	4.4
EU	10.4	EU	9.6

Steel prices are generally set in contracts between major producers and their clients. However, the London Metal Exchange offers a number of steel billet contracts for delivery to locations across Europe, Asia and North America. Whilst there are many varieties of steel, Hot Rolled Coil (HRC) is a commonly referenced price, but regional complexities prevent the emergence of a clear benchmark at present.

¹ Individual forecasts available in the Excel spreadsheet service.

Iron ore was traded in world markets under contracts. Prices were set by negotiation between iron ore producers and steel manufacturers. Three suppliers, Vale, Rio Tinto and BHP Billiton accounted for 75% of ocean trade in iron ore in 2006. Fines are the most heavily traded category (60% of global trade) while lump iron ore trades has generally traded at a premium price. Producers dropped the annual benchmark price system in April 2010 in favour of quarterly prices based on prior average daily spot prices.

Forecasts for the metals shown on this and the next page were provided by the following leading forecasters:

Manganese is not exchange-traded so prices are established by negotiation between buyers and sellers. Negotiations occur in line with the beginning of the Japanese fiscal year in April. Following the setting of prices with Japanese manufacturing companies, similar settlement prices are set worldwide.

The price is based upon a benchmark ore of 44% manganese content, Cif, Tianjin, China.

MOLYBDENUM

(Nominal, Quarterly Averages)

Sep 2017	965.6	20.7%	1250	800.0

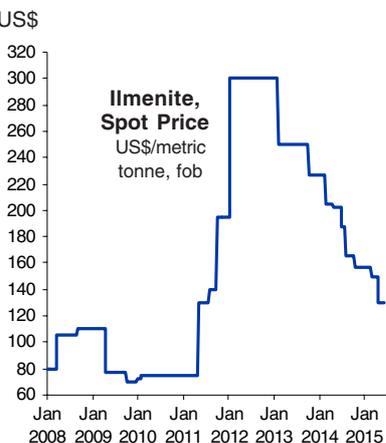

Mineral sand prices are principally determined by derived demand. Rutile is used to make titanium dioxide (it is approximately 95% TiO₂ in its mineral form), which can be used to make titanium or as a white pigment in papers, plastics and paints and cosmetics.

Prices are set under long-term contracts between producers (many of which will produce from mine to end use) and consumers.

ILMENITE

(Nominal, Quarterly Averages)

US\$/metric tonne	Consensus (Mean)	% change from spot	Forecast Range	
			High	Low
Spot price	130.0 e			
Jun 2015	140.8	8.3%	185.0	100.0
Sep 2015	147.4	13.4%	190.0	120.0
Dec 2015	150.5	15.8%	190.0	120.0
Mar 2016	159.8	22.9%	200.0	130.0
Jun 2016	159.7	22.9%	200.0	130.0
Sep 2016	163.8	26.0%	200.0	130.0
Dec 2016	163.7	25.9%	200.0	130.0
Mar 2017	168.6	29.7%	200.0	141.9
Jun 2017	168.4	29.6%	200.0	140.4
Sep 2017	172.5	32.7%	200.0	138.9

Ilmenite is mined alongside rutile and is also used to make titanium dioxide (it is approximately 54% TiO₂ in its mineral form). Prices are set under long-term contracts. The value of ilmenite is substantially lower than that of rutile and is therefore often used to produce synthetic rutile. 90% of titanium metal is sourced from ilmenite.

Australia is the world's largest producer (55%) of ilmenite and rutile followed by South Africa (24%) and Ukraine (16%).

ZIRCON

(Nominal, Quarterly Averages)

Sep 2017	1135	3.1%	1250	878.1

The price of Zircon (which is mainly used in ceramics and tiles) is set under long-term contracts between producers and consumers. It has risen sharply in recent years following the move from spot-trading to contract-trading.

Iluka is the world's largest zircon miner and as a result the most influential in setting a benchmark price. Its Eucla basin in Australia is mined principally for zircon unlike the majority of other mines, for which zircon is a coproduct of rutile and ilmenite.

Relatively Downbeat Price Outlook

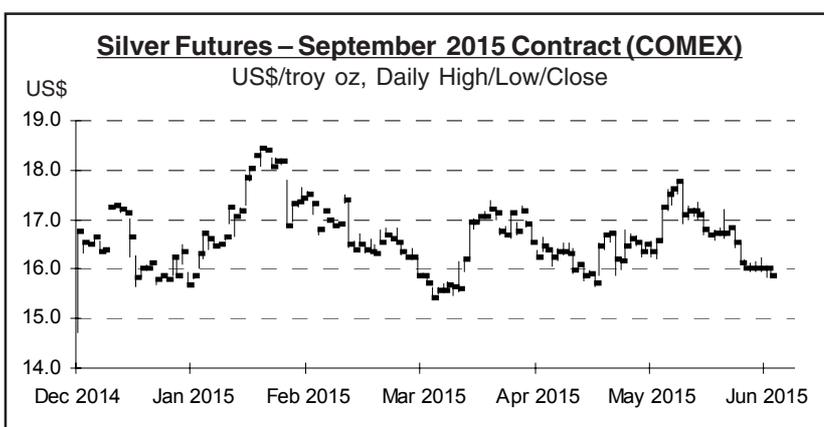

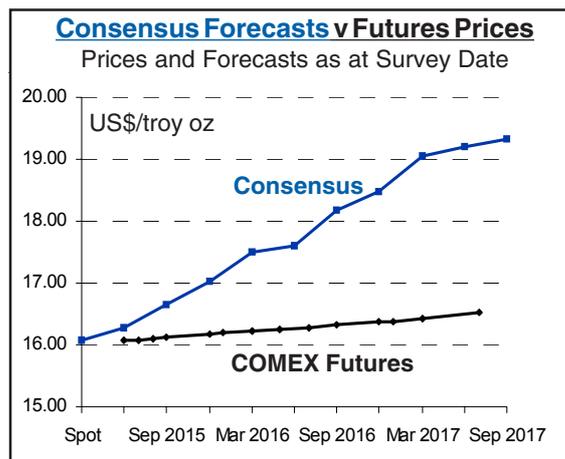

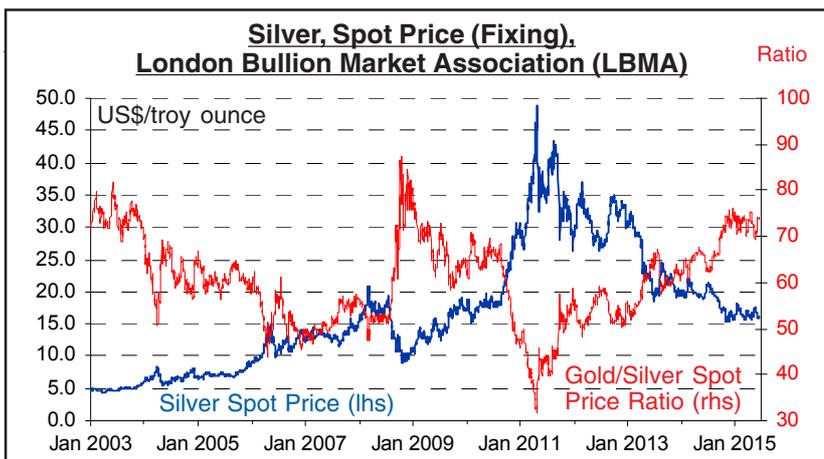

- ◆ Gold retraced some of its losses last week as heightened uncertainty over a possible Greek debt default lifted safe haven demand. However, the opposite influence continues to come from solid US indicators, with speculation about a rate hike as soon as September. Car sales and housing starts have soared in recent months, while 280,000 jobs were added in May. The path of US monetary tightening is likely to be gradual, however.
- ◆ Increased jewellery demand from India ahead of the main wedding season should offer some near-term gold price support.

Improving Supply and Demand Fundamentals

- ◆ With underlying US\$ strength and widespread disinflation around the globe hampering the appeal of precious metals, silver has struggled in recent months.
- ◆ Our panel expects the metal to strengthen during the second half of 2015 and beyond, mainly reflecting adjustments to supply and demand fundamentals.
- ◆ Current depressed price levels look likely to encourage a reduction in silver production while industrial demand for the metal is set to rise on the back of a pickup in usage, notably on solar power projects.

World Production and Uses of Silver (2013)			
Producer	Millions of Ounces	Use	% of total demand
1. Mexico	169.7	1. Industrial Applications	54.3
2. Peru	118.1	2. Coins & bars	22.7
3. China	118.0	3. Jewellery	18.4
4. Australia	59.2	4. Photography	4.7
5. Russia	45.4	5. Silverware	4.6

Silver, like gold, has a price set by members of the LBMA which is used as a benchmark for over-the-counter trades.

Sputtering Global Recovery Dents Prices

- ◆ The platinum/gold spot price ratio fell to its lowest level since 2013 in early June (see chart, above left) amid fresh concerns over the global growth outlook.
- ◆ Uncertainty surrounding a Greek bailout intensified in the run-up to our survey date as the IMF walked away from negotiations.
- ◆ Platinum, which is primarily used as an emission-reducing autocatalyst, has weighed down by recent car sale falls in China and the euro zone. However, the consensus is predicting that a price rebound during the next four quarters.

Platinum Production and Consumption (2013)			
Production	% of world total	Consumption	% of world total
1. South Africa	71.8	1. China	27.9
2. Russia	13.6	2. Europe	21.0
3. Zimbabwe	7.0	3. North America	12.8
4. North America	5.5	4. Japan	11.2
Rest of the World 2.2		Rest of the World 27.1	

Platinum prices are fixed twice daily by the LPPM to provide a benchmark price in a practice similar to that used for gold and silver.
US Futures Market: NYMEX Pricing: US\$/troy ounce **Lot Size:** 50 troy ounces **Deliverability:** Over 15 months including the next 3 calendar months; then a January, April, June and October cycle. **Contracts Traded:** 3,235,941 (2014)

Solid Gains Expected

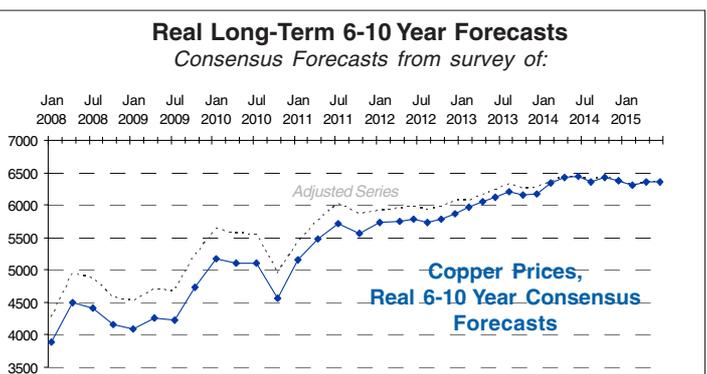

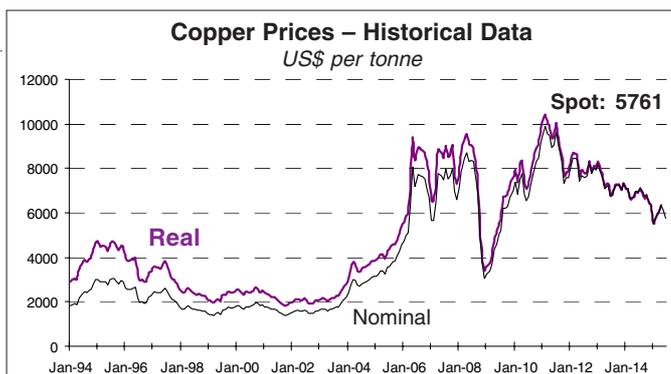

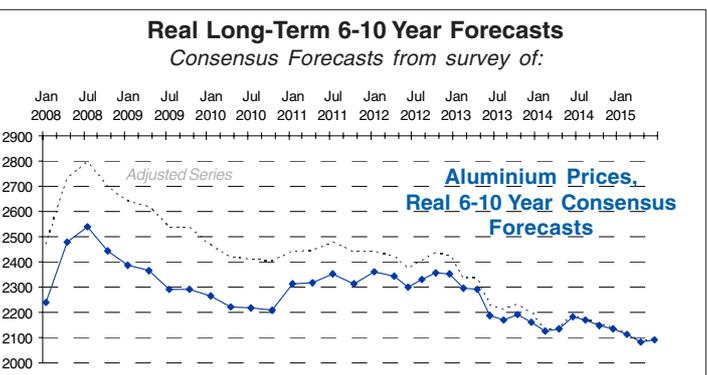

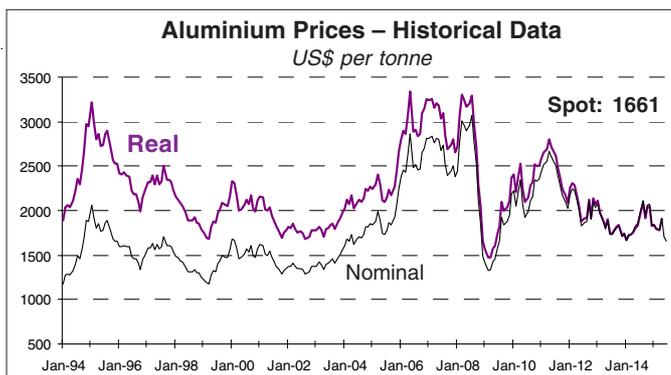

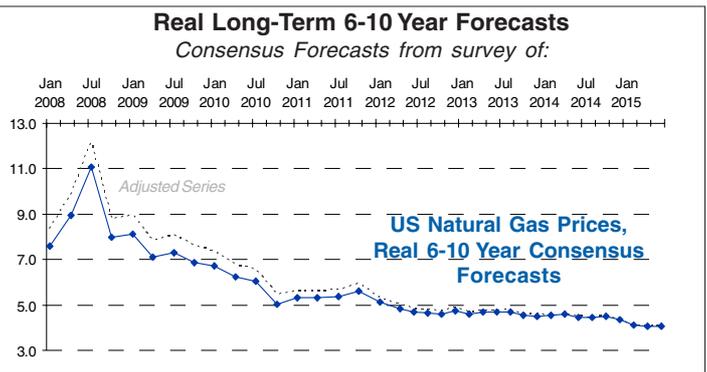

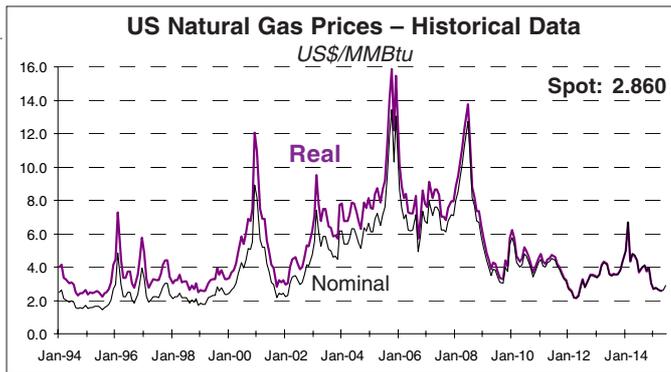

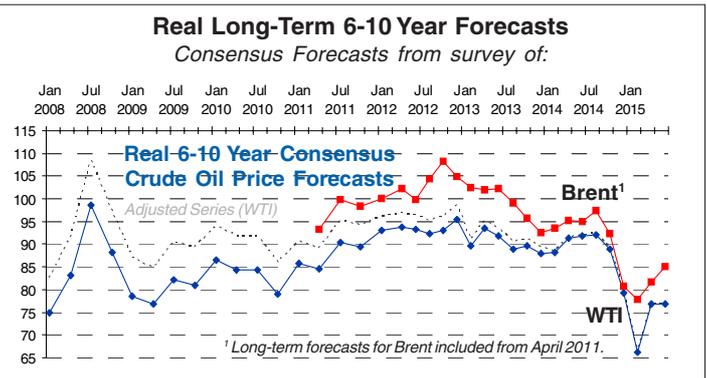

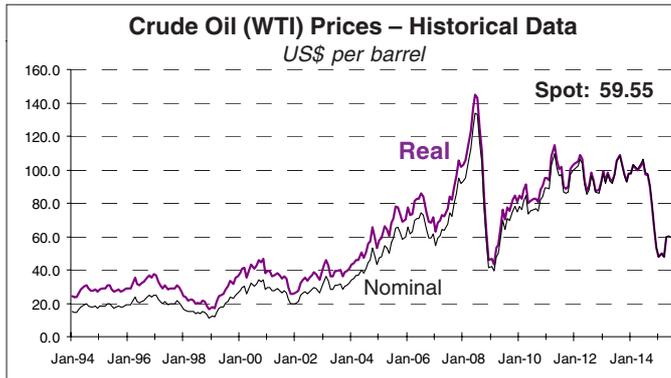

- Caught in the downdraft of sister metal, platinum, palladium fell to a two-month low of US\$730.6 per troy oz on our survey date.
- The consensus is predicting a rebound in the metal due to environmental considerations and high auto sales in China and the US – palladium is most commonly used in catalytic converters.
- Stricter environmental regulation to combat pollution in China and simmering geopolitical tensions involving the world's leading palladium producer, Russia, add upside risks to the price outlook.

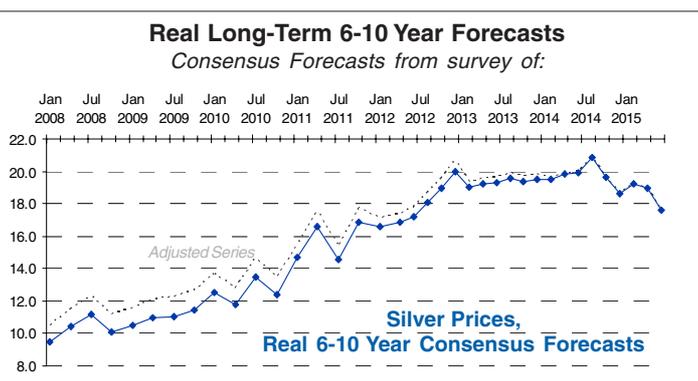

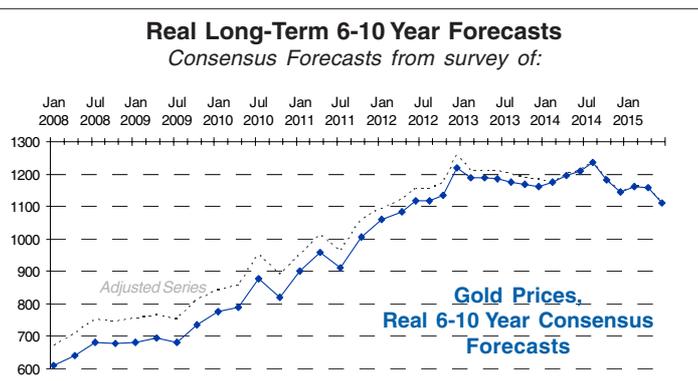

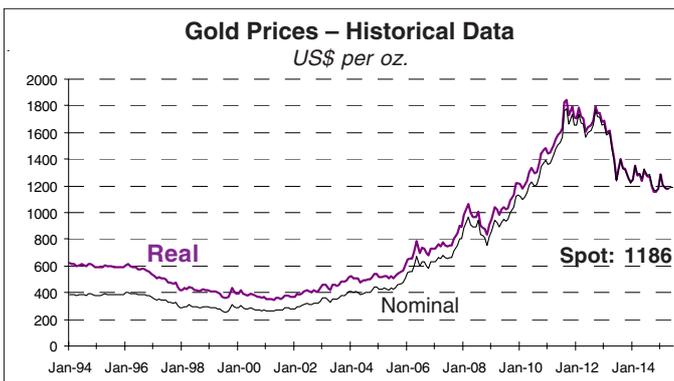

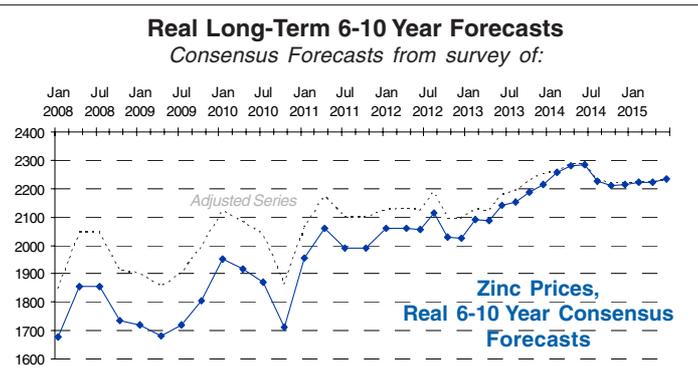

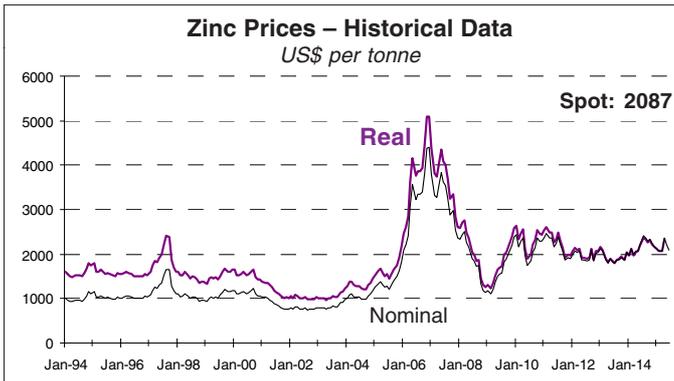

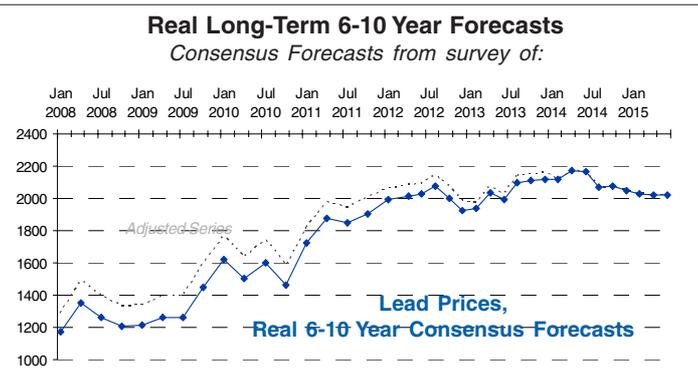

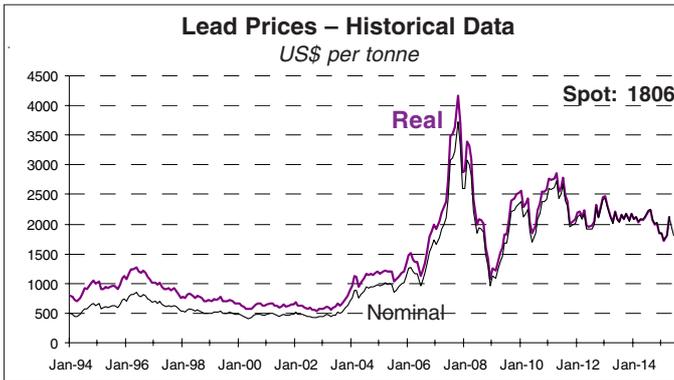

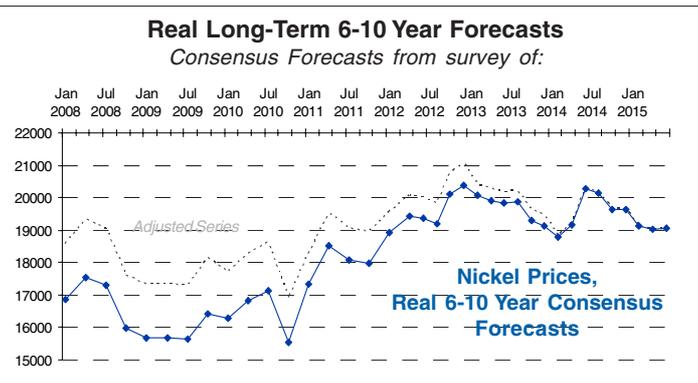

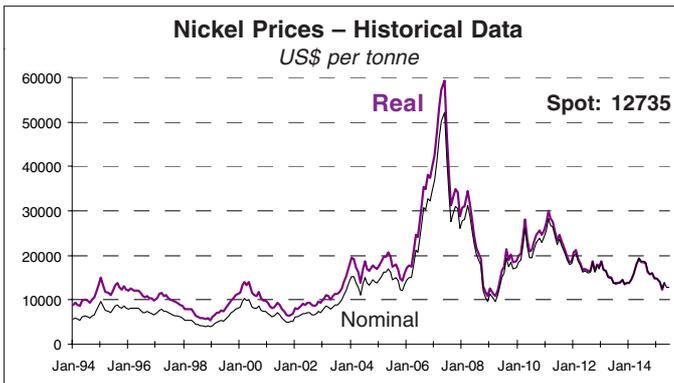

Palladium Production and Consumption (2013)			
Production	% of world total	Consumption	% of world total
1. Russia	42.0	1. North America	24.7
2. South Africa	36.5	2. China	21.3
3. North America	14.5	3. Europe	20.2
4. Zimbabwe	4.8	4. Japan	13.4
Rest of the World 2.2		Rest of the World 20.4	

Palladium prices are fixed twice daily by the LPPM to provide a benchmark price in a practice used for other precious metals. Most palladium is used in catalytic converters. **US Futures Market: NYMEX Pricing:** US\$/troy ounce **Lot Size:** 100 troy ounces **Deliverability:** Over 15 months including the next 3 calendar months; then a March, June, September and December cycle. **Contracts Traded:** 1,573,972 (2014).

Nominal prices are expressed in fixed money terms in a given year, while real values adjust for inflation over the years. In the **historical data charts** below and on the next page (covering 1994 to 2014), we show commodity price series in both nominal (**black line**) and real terms (**purple**). Nominal values are stated in current 2014 US\$ prices (definitions on individual commodity pages), while the real price series inflates the nominal values using the US CPI index (Jan. 2014 = 100). Real prices are important in the analysis of project feasibility and other long-term investment decisions, as is the choice of deflator. Adjustments based on general purpose price indices may be adequate for exploratory data analysis. To the right of each historical data chart, we graph **changes in the**

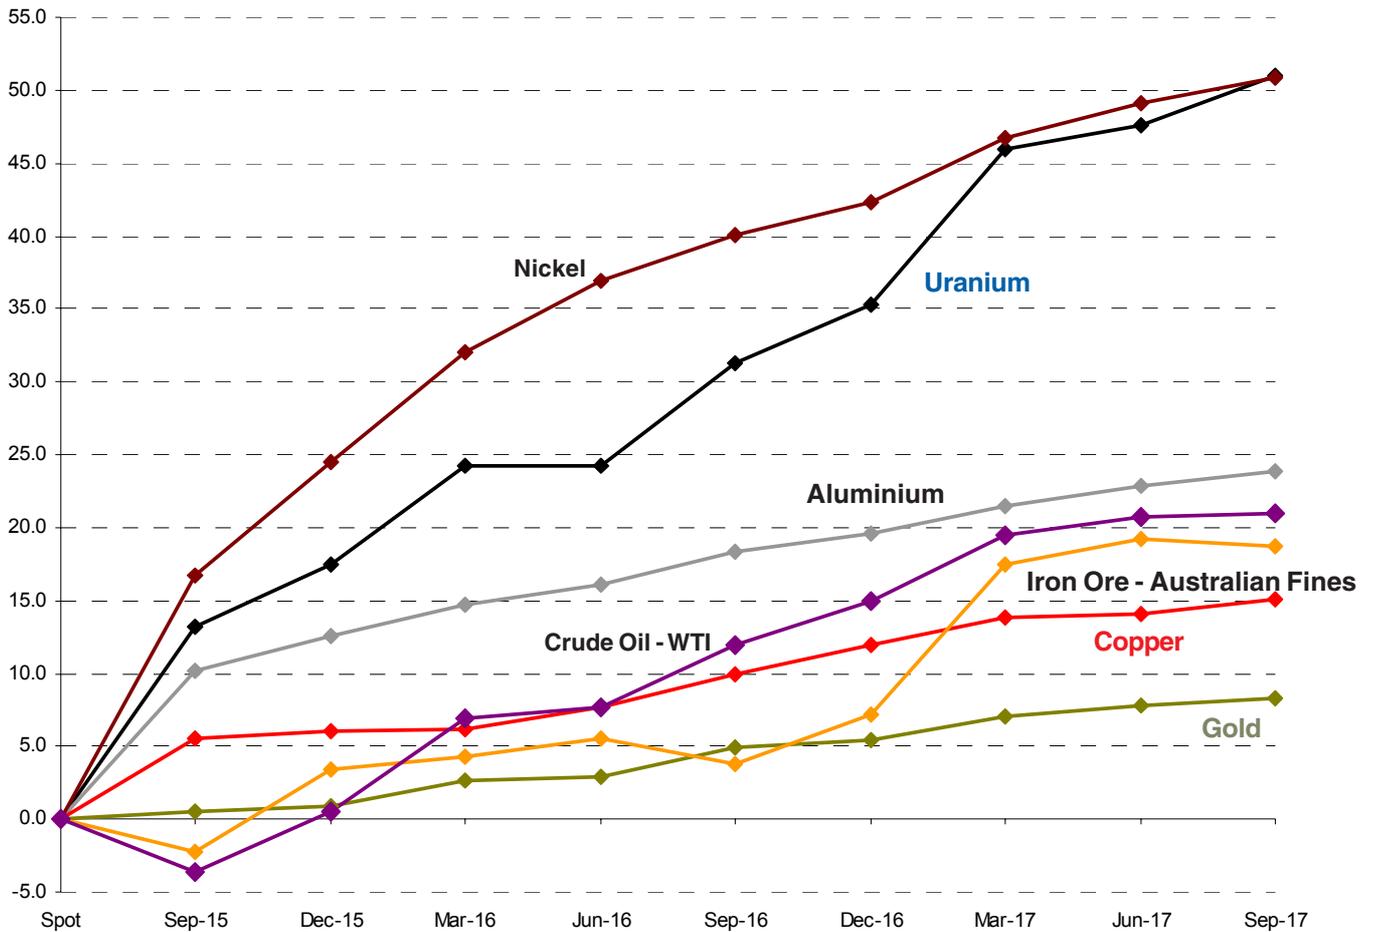

real long-term consensus price forecasts (for the 6-10 year rolling aggregate periods) back to January 2008. These price forecasts (**blue line**) are based on the US dollar level for the year in which they are made i.e figures from our 2008 survey are inflation-adjusted at 2008 US dollar prices. In order to make the historical long-term price forecasts comparable with those made in subsequent periods – the last three of which are in 2015 US dollar terms – we have adjusted the series using US CPI (**dashed grey line**), in much the same way as we did with the historical data. For several commodities, the long-term forecasts table on page 5 suggests that the real consensus price expectations can be 70% above (e.g. Uranium) or almost 10% below current spot prices.

CONSENSUSECONOMICS INC.

Established in London in 1989, Consensus Economics prepares monthly compilations of country economic forecasts and topical analyses covering the **G-7 Industrialised Nations, Asia Pacific, Eastern Europe and Latin America**, as well as specialised publications on **Foreign Exchange Forecasts** and **Energy and Metal Price Forecasts**. Over the past two decades Consensus Economics has cultivated a growing network of economists, drawing upon the expertise of well-established local consultancies and large teams of professionals in banks who are dedicated to particular countries and regions.

Energy & Metals Consensus Forecasts® is available at US\$745 or £460 or €555 or A\$810 for 6 bi-monthly issues.

For prices and descriptions of all our publications and other regional products and services – including a range of electronic delivery options – visit our website: www.consensuseconomics.com, or contact us at editors@consensuseconomics.com.
